My name is Chet Belcher, and I am originally from Spring Hill, Kansas. After graduating from Spring Hill High School I attended Emporia State University. After two years at Emporia State University I transferred to the University of Kansas where I graduated in 1998 with a Bachelor of Science degree in Civil Engineering. Upon graduation I began working for Phelps Engineering designing subdivisions and flood control projects. After five years, I made a career move to the Johnson County Stormwater Management Program. After leaving Johnson County I went back to the private sector as a consulting engineer and office manager. At J2 Design, I serve the role of office manager for our Kansas Office. My project experience includes the design and management of storm drainage improvement projects, floodplain studies, and watershed master plans along with providing general civil engineering services including site design, street design and sanitary sewer design.

My home is in rural Miami County, Kansas, near Spring Hill, with my wife of 16 years (Amy) and two daughters - Madeline (10) and Elise (7). I spend most of my free time coaching my daughters' softball and basketball teams. When I am not coaching or relaxing at home with my family, I spend as much time as possible outdoors hunting, fishing, and camping.
