I grew up in Imperial, Missouri, which is a small town located approximately 30 miles south of St. Louis. I graduated from the University of Missouri-Rolla in 1993 with a BS in geological engineering. Soon thereafter I started my engineering career at a small civil firm not too far from Imperial. After receiving my MS in civil engineering, I began my Geotechnology career in 1998 where I started as a field engineer on the back of a drill rig. In 2008 I assumed the position of Geotechnical Group Manager of Geotechnology's St. Louis branch. Earlier this year I was promoted to Branch Manager of our Overland Park office.

As of the end of June I live in DeSoto, Kansas with my wife, Leah, and my sons, Jackson (14), Caleb (14) and Samuel (10). We are still moving in, and my wife and I are anxious for our boys to make friends and get into a routine. Currently, our evenings and weekends revolve around high school cross country, middle school football, Boy Scouts, Cub Scouts and home improvement projects (however, I am much better at burning and tearing things apart than I am at constructing).
