After graduating from Kansas State University in Structural Engineering, Chris went to work for Delich, Roth & Goodwillie Engineers in Kansas City. As a design engineer, Chris' responsibilities included structural and civil design, hydraulic assessments, load-rating analyses, cost estimating, plan review, and development of specifications. His design projects have included highway and rural bridges, culverts, building rehabilitations, roadways, retaining walls, pump stations, and levees. In the field he performs structural inspections and project construction observation. He is a NHI (National Highway Institute) certified bridge inspector, NHI fracture-critical bridge inspector, and KDOT certified bridge inspection team leader. Chris is also a certified construction inspector with KDOT and the City of KCMO. He has inspected bridges, culverts, buildings, roadways, flood walls and dams

In June 2013, Delich Roth and Goodwillie merged with Alfred Benesch Company, and Chris currently is a project manager operating out of the Bonner Springs, Kansas office. Beyond structural design and project management, Chris actively leads many of the marketing efforts for the structural and roadway groups. Outside of the office, Chris enjoys staying active focusing primarily on softball and golf.
