

Patrick S. Baer, P.E.

A project engineer at Baughman Company, for the last four years, my engineering career has focused mostly in Site Development with in Kansas. As a new civil engineering graduate of South Dakota School of Mines and Technology, I relocated my family to Kansas 16 years ago and began my career at Boeing Company. After 2 years as an aircraft design engineer, I decided to redirect my career focus into site development. Since then I have focused mainly on commercial and residential development, emphasizing on drainage analysis and site design. Being a project engineer and working directly with owners, architects and city officials has been very rewarding.

Since moving to Derby Kansas, I count myself lucky. In addition to raising my two daughters with my wife of 22 years, Sonya, I have enjoying my involvement in the local engineering community. A past board member and President of Wichita Society of Professional Engineers I have also volunteered mentoring with Project Lead the Way. In order to give back to the community, I currently reside as the Chairman of the Derby Planning Commission along with volunteering time and effort to Band and Drama Booster Clubs for Derby High School.
