

Stephen C. Damron II

Steve Damron is the Construction Materials Testing (CMT) Group Leader for the Kansas City office of Geotechnology. Steve has been with the geotechnical engineering, environmental science and construction material testing firm since 2011. His responsibilities include business development, proposal writing, project management, staffing, and training.

In 1989, Steve's career started as a field and laboratory technician providing construction observation and material testing services for structural fill, foundation bearing materials, reinforced concrete, structural masonry, stabilized subgrades and Portland cement and asphaltic concrete paving. Project experience has ranged from single-story buildings to complex multi-story structures and from parking lots to extensive highway and airport paving projects. Certifications currently held by Steve include NICET, ICC, ACI, KDOT and MoDOT. Steve has over 25 years of construction material testing experience and has become a trusted advisor in the Kansas City construction market.

Steve is a key member of the Kansas City office leadership team. His ability to develop and maintain professional relationships, externally as well as internally, has resulted in significant growth. He is currently serving on Geotechnology's strategic planning committee and is developing a comprehensive training manual for the CMT field staff.

In his free time, Steve enjoys spending time with his wife, three children and friends. Steve's wife, Candi, loves gardening and antique shopping. His oldest son is a member of the United States Navy. Steve's youngest son is an avid soccer player and his daughter is currently working on a horse ranch and at the Clinton Lake Marina. Steve's hobbies include fishing, hunting, camping, motorcycle riding, and participating in area BBQ contests.
