Kurt Roterling graduated from Kansas State University with his bachelors and masters degrees in Civil Engineering. He then began his career as an engineer designing streets, signals, and developments in Manhattan, Kansas. Eventually he saw the light and found his love for traffic. Kurt now works closely with municipalities and state DOT's designing ITS, traffic signal systems, access management plans, and traffic control. He is currently a Senior Transportation Engineer with Iteris in Kansas City, Missouri.

On the personal side of things, Kurt grew up in small town North Dakota and now lives in Overland Park, Kansas with his wife Lori and their dog Bender. Most evenings are taken up with playing basketball and old-man softball or figuring out how to complete a never ending honey-do list. Kurt and Lori also enjoy traveling, attending K-State football games, and just relaxing in their backyard with a cold IPA and a glass of wine.
