I am a Project Manager and Engineer for HDR, Inc. with over eight years experience, primarily in water and wastewater planning and design. Following graduation from the University of Missouri – Columbia, where I received a BS in Civil and Environmental Engineering, I launched my consulting career for a WBE in San Francisco, California. While working in the Bay Area, I refined my professional focus to drinking water treatment and operations; water quality regulations and compliance; recycled water permitting; and green energy planning. For nearly seven years, I volunteered with the California-Nevada American Water Works Association where I served as the Technical Program Director among many other volunteer roles. In 2014, I had the distinct honor of receiving the Don Kaiser Volunteer of the Year Award for the CA-NV AWWA Section.

Upon returning to my home state of Missouri and joining the HDR team, I've expanded my professional focus to include wastewater treatment planning and design. I now have my Professional Engineering license in three states: California, Missouri and Kansas. I look forward to expanding my resume to work on a variety of projects in many more states.

In addition to valuable changes in professional career, returning to the Midwest has been a great joy for my young family. My husband, Donovan, began his Masters of Architecture at the University of Kansas in Lawrence. We also purchased our first home in the Southmoreland Neighborhood in midtown Kansas City. During my free time, you may find me throughout our new neighborhood with Donovan and our four-year old daughter, Ruth, exploring the Nelson-Atkins, enjoying Shakespeare in the Park, or grabbing an ice cream cone at Quick-Trip on a hot July afternoon.
