Prior to graduating from Iowa State University, I worked in the Office of Bridges and Structures at Iowa DOT in the preliminary bridge design group. My main projects included hydraulics and hydrology reviews and developing tools for hydraulic design. After graduation, I moved to Omaha, Nebraska to work for The Schemmer Associates, a full-service engineering and architecture firm. For seven years I was bridge design engineer and worked on many projects around Omaha and Lincoln. In 2008 I joined TranSystems in Omaha as a bridge engineer and immediately started bridge inspection projects alongside design projects. After two years in Omaha with TranSystems, I relocated to the Kansas City office. Now, I'm a bridge engineer and project manager for several projects around the Midwest, most of which focus on bridge inspection. I've had the opportunity to visit some pretty interesting places and climb some pretty interesting bridges.

I grew up in Milwaukee, Wisconsin; I'm still a Packers fan and Brewers fan. My husband and I just celebrated our 15th anniversary by doing very little – it was pretty nice. We have two children, ages 9 and 6. They keep us busy with all their activities, but we certainly find time to enjoy family activities together like Royals baseball, Cyclone basketball, skiing, trips to the lake and the park, cooking together, games of all kinds, and movie nights! When I do have time to myself, my indulgences are baking and crafting.
