I graduated from Kansas State University with a degree in Biological & Agricultural Engineering. I worked for Wilson & Co. briefly before moving on to KLA Environmental Services, Inc. KLA Environmental Services, Inc. was formed in April 2001 by the Kansas Livestock Association to help livestock producers comply with the growing number of environmental regulations. My main focus is on confined livestock feeding facility design and waste management system analysis and design. I also work in the water resources sector, focusing on dam design, dam safety inspections and breach inundation mapping.

I have been married to my wife Jennifer for 15 years. She is a KSU graduate who works in the finance department of a local bank. We have three children who keep us very busy. I enjoy hunting, fishing and watching sports.

Fun Fact: I spent two summers with the Bureau of Land Management working as a Wildland Firefighter and assisting at the Wild Horse Facility in Rock Springs, WY.

Favorite Quote: "If you put the federal government in charge of the Sahara Desert, in 5 years there'd be a shortage of sand." – Milton Friedman

My job would be a lot easier if I had bigger project budgets and fewer government regulations.
