I grew up in Overland Park, Kansas and attended the University of Kansas, receiving a degree in Electrical Engineering. I received my professional engineer's license in fire protection when I was working for Kemper Insurance in February of 1995. For the past twelve years I have been working for Poole Fire Protection as a fire protection engineer in Olathe, KS. I have been working on a variety of projects for both private and public sector clients. My responsibilities include providing fire protection engineering design services, facility assessments, computer fire modeling, and code consulting services. My project tasks include inspection of new and existing facilities checking for compliance with codes, standards, project specifications and drawings. My projects have included aircraft hangars, educational facilities, healthcare facilities, and military installations. I am a member of the National Fire Protection Association, the local Mo-Kan Chapter of the Society of Fire Protection Engineers, and a professional member of the National Society of Fire Protection Engineers.

I currently live in Lenexa, KS with my wife Jeanne. In my spare time I enjoy going to the lake, taking walks and working on computers.
