I grew up in the small town of Pierre, South Dakota on the banks of the Missouri River. After high school I attended South Dakota State University for one year, to learn the finer points of duck hunting, and then transferred to Kansas State University where I obtained a bachelors degree in Civil Engineering with a secondary major in Natural Resources and Environmental Science in 1998. I have taken some additional graduate classes at the University of Kansas towards an Engineering Management Masters Degree.

After college I started my engineering career at Terracon in their Lenexa, Kansas office. At Terracon I worked in the environmental department on a wide variety of projects primarily related to solid waste and agricultural facility design.

In 2002 I departed Terracon to join the newly launched Aquaterra Environmental Solutions where I became the first non-principal employee. Aquaterra was founded by my previous supervisor at Terracon and two other professional engineers. Since that time, Aquaterra has grown from the original three principals to an 80+ employee firm with 9 branch offices in 6 states. At Aquaterra I have progressed from project engineer and chief coffee maker/buyer to my current position of Associate Principal and Kansas City Office Manager. I also currently serve as Aquaterra's Alternative Energy Practice Leader and as Chairman of the Board of Directors. I am a licensed Professional Engineer in Kansas, Missouri, North Dakota, and Texas.

On a personal front I live in southern Overland Park with my wife Jaime and our two and half year old twins Allison and Tyler. When I am not changing diapers or explaining why

we don't hit each other with books or write on the walls in our house, I enjoy a variety of outdoor activities including boating, fishing, camping, hunting, golf, and archery. I am looking forward to an upcoming Colorado elk hunt with my dad and brother.

I look forward to making some new friends and expanding my business network through this program.
